Looking under the hood of ongoing research

RESEARCH AIM

- To better understand new ‘digital’ ways of organizing innovation for firms
- Discover original explanations for why individuals engage and succeed in entrepreneurship

Do we really know how platform models for innovation work?

How to grow two-sided markets...

RESEARCH QUESTIONS

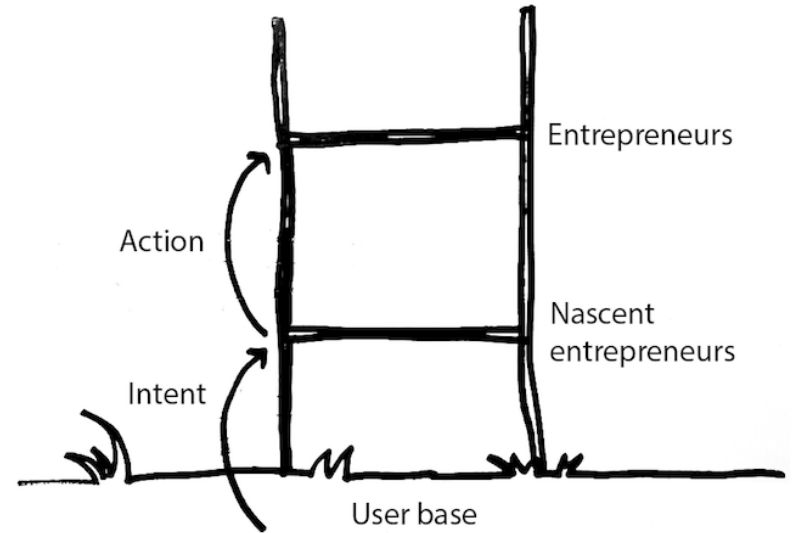

To what degree can we predict which individuals are likely to help grow the supply side of a technology platform?

To what degree can we predict “app entrepreneurship” based on individuals’ communication, social networks, and consumption of apps?

ENTREPRENEURSHIP AS A STAGE PROCESS

- > **Engagement / intent**
- > **Commercialization / action**

The Rack Extension platform

"Rack Extensions take all the good things about plugins and then marries it to all the good things about Reason."

Ernst Nathorst-Böös, CEO

Design it, code it, test it, ship it. With Propellerhead's Rack Extension platform, developers can move faster from initial idea to finished product than ever before. Regardless of whether your skills lie in hardcore DSP coding or in creating beautiful samples, the Rack Extension platform has all the tools you'll need to develop stunning instruments and effects and bring them to market with minimum effort and maximum support.

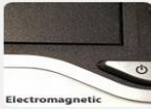

The recently updated developer toolkit adds features and tools for developers to create even more advanced and great-looking instruments and effects. With the Instrument Development Toolkit, it's easier than ever to build advanced instrument Rack Extensions, even without prior coding experience.

Rack Extensions are full citizens of the Reason Rack, cross-platform compatible, copy-protected, future-proof, and easy to sell direct to Reason users in the Propellerhead Shop.

"We've already transformed a few of our current products to Rack Extensions. The back

Market/Consumption
patterns

USERS, APPS, AND ENTREPRENEURS

Users and forum:

+500,000 unique user ID's exist in data tables from the company ERP system

- ▶ In 2012-2013, 4.321 individuals wrote at least two text posts in the forum. We focus on these individuals

Apps sales transactions:

60,000 purchases of 600 different apps by 14,000 individuals from market launch (mid-2012) through 2013

Entrepreneurs:

109 new nascent entrepreneurs between 2013 and 2014 (events for RQ1 – out of 4,058 'debating' users)

70 entrepreneurs between 2013 and 2014 (events for RQ2 – out of 219 nascent entrepreneurs) [4,058+219+44 (entrepreneurs) =4,321]

→ Entrepreneurship is a rare event! (Åstebro & Dahlin, 2005)

DEPENDENT VARIABLES

1. Revealed *entrepreneurial engagement* (register as a developer)
2. *Commercialization* – launch an app for sale on the platform (entrepreneurial action)

AS AN EXAMPLE...

Encouragement from other persons in the community may exercise an effect on subsequent behavior (intent/commercialization):

- * *“Thank you for the really quick response. I look forward to your upcoming [APP]. They are always excellent.”*
- * *“Great, get [APP] to the Shop already! Cant wait to see this in the shop! :)”*
- * *“Just wanted to chime in here and say that this is an incredible deal. (...) for \$50 is absolutely astounding”*
- * *“ These sound great, nice work! (...) I just picked this up yesterday, great bargain for the price”*
- * *“Nicely done ! This goes to show that [APP] is a superb RE on its own but it is also one of the devices that can bring a lot to other devices and be used in many different ways.“*

RESULTS SO FAR...

- ▶ Contagion predicts entrepreneurial engagement
- ▶ Number of app purchased, and number of base products registered likewise predicts entrepreneurial engagement
- ▶ Encouragement predicts movement into commercialization
- ▶ All bulk consumption measures likewise predicts entrepreneurial commercialization

WHAT DOES IT MEAN...

Firms that base part of their innovation activities on platforms can make sound predictions early on about who will move into entrepreneurship and be successful on the supply-side

Thank you!

All comments and questions are
appreciated!
